

Prompt 8

KKC TEXT ADVENTURE — PROMPT 8 OF 180

=====

Canon Registry: Ground-Truth Facts for Narration

=====

This prompt builds directly on Prompts 1, 2, 3, 4, 5, 6, and 7.
Do not restructure, rename, or refactor anything from those prompts.
Only add to what exists.

This prompt follows the original Phase 1 plan role for Prompt 8:
add a canon registry module containing confirmed lore facts that the
narration layer can import as ground truth.

Do not add new gameplay systems in this prompt.

HARD BANS — UNCHANGED

No Anthropic. No OpenAI. No additional AI providers.
Gemini remains the only optional LLM provider in this codebase.

No web server. No frontend.
No new AI adapter.
No new commands.
No new locations.
No new NPCs.
No new economy, sympathy, or social systems.

Do not add:

- a lore-guard logger yet
- a mystery registry yet
- forbidden phrase logging beyond Prompt 6 validation
- hidden-lore inference
- any module that decides gameplay truth

This prompt is about canon grounding only.

ARCHITECTURE RULE — STILL ABSOLUTE

engine/* owns:

- command parsing
- movement
- access checks

- time advancement
- state mutation
- persistence
- sympathy truth
- social truth
- music/Eolian truth

narration/* owns:

- prose rendering only
- prompt construction only
- fallback rendering only
- canon grounding for prose only

The canon registry:

- must never mutate PlayerState
- must never write to the database
- must never invent lore
- must only provide safe, structured, relevant facts
- must not resolve mysteries
- must not contradict engine truth

GOAL OF THIS PROMPT

By the end of Prompt 8, the project should have:

- a structured canon registry module for the current MVP scope
- compact confirmed facts for:
 - currency
 - academic ranks
 - Archives access
 - sympathy constraints
 - talent pipes / Eolian
 - University / Imre / Stonebridge context
 - key seeded locations and seeded authority/social NPCs
- a deterministic way to select only the canon facts relevant to the current scene
- promptBuilder integration so Gemini receives:
 - canon-era context
 - plus a compact canon ground-truth block
- no mystery resolution or speculative lore added

The local deterministic narration path must continue to work unchanged.

SCOPE OF THIS PROMPT

This prompt covers:

1. Add canonRegistry.ts as a structured TypeScript module
2. Add a compact CanonRegistryEntry type
3. Add canon_registry_facts to NarrationSceneContext
4. Add helper functions to select scene-relevant canon facts
5. Update narrationContext.ts to populate canon_registry_facts
6. Update promptBuilder.ts to include a "Canon Ground Truth" section
7. Strengthen canonInstructions.ts to treat registry facts as hard constraints
8. Add tests for registry selection and prompt integration

This prompt does NOT cover:

- lore-guard logging (next prompt)
- a mystery registry as a separate machine-readable module
- new NPC dialogue systems
- new commands
- new locations or new seeded content
- new game mechanics

NEW FILES IN THIS PROMPT

Add exactly these files:

```
src/  
  content/  
    canonRegistry.ts  
tests/  
  canonRegistry.test.ts
```

Modify these existing files:

```
src/types/index.ts  
src/narration/narrationContext.ts  
src/narration/promptBuilder.ts  
src/narration/canonInstructions.ts  
tests/promptBuilder.test.ts
```

Do not add any other files.

TYPES — update src/types/index.ts

Do not remove or rename existing types.

Add:

```
export interface CanonRegistryEntry {
  id: string;
  text: string;
  applies_to: string[]; // e.g. ['global'], ['University'], ['archives'], ['eolian']
  tags: string[];       // e.g. ['money', 'rank', 'sympathy', 'pipes']
}
```

Update NarrationSceneContext to include:

```
  canon_registry_facts: string[];
```

Rules:

- canon_registry_facts must contain compact human-readable fact lines
- this is narration context only
- do not store registry facts in PlayerState
- do not add any other new types in this prompt

CANON_REGISTRY — src/content/canonRegistry.ts

Implement this file as a TypeScript data module, not a raw .json file, so the existing codebase can import it directly without loader changes.

Export:

```
CANON_REGISTRY: CanonRegistryEntry[]
```

```
getRelevantCanonFacts(input: {
  command: string;
  locationId: string;
  locationGroup: string;
  visibleNpcNames: string[];
}): string[]
```

Rules:

- All facts must be short, factual, safe, and grounded in the current MVP scope only
- No speculative lore
- No mystery resolution
- Deterministic stable order
- Return at most 6 fact lines
- Return at least 2 fact lines whenever possible
- Never include facts about Chandrian, Amyr, Denna's patron, Doors of Stone, hidden Names, or any unresolved deep
